

TECHNICAL AND COMMERCIAL BID

Submitted in response to RFP for Advanced Metering Infrastructure (AMI) System Implementation

Bidder Name:	Meridian Power Solutions Ltd.
Consortium Partner:	None (single-entity bid)
RFP Reference:	Model-RfP-Final_0 / AMI Smart Metering Program
Date of Submission:	14 March 2026
Bid Validity:	180 days from bid due date
Contact:	A. Fonseca, Business Development Lead, tenders@meridianpower.example

1. Covering Letter

We, Meridian Power Solutions Ltd., submit our bid for the design, supply, installation, integration, testing, commissioning, and maintenance of the Advanced Metering Infrastructure (AMI) system as described in the Scope of Work. We confirm receipt of the RFP and have prepared this response as a single-entity bidder, without a consortium partner for the Communications Network scope.

2. Response to Qualifying Requirements (Section 4.3)

2.1 Quality Certification (QR Table, Item 2)

Meridian Power Solutions Ltd. holds ISO 9001:2008 certification (Certificate No. MPS-QA-2017-08, current and valid). CMMI Level 3 appraisal is currently in progress; our organization completed the Class B appraisal readiness review in the last quarter and expects to receive formal CMMI Level 3 certification next quarter, following completion of the SCAMPI appraisal. We request that the evaluation committee consider our readiness review documentation, appended as Annexure B, as evidence of substantial compliance pending formal certification.

The Bidder holds ISO 14001:2015 certification (current). Our ISO 27001:2013 certification lapsed in the preceding cycle and is presently in renewal; the renewal audit has been scheduled but not yet completed as of the date of this bid. We anticipate the renewed certificate will be issued within 90 days and undertake to submit it prior to contract signing.

2.2 Technical Experience

Meridian Power Solutions has been active in communications network installation and maintenance services for four (4) years in India, satisfying the minimum three-year requirement. The Bidder has implemented projects covering a cumulative total of approximately 6,200 communication module/endpoints using GPRS-based communication technology, which is below the 10,000 endpoint qualifying threshold specified in the RFP. The Bidder has integrated its communication module with meters from two (2) manufacturers in India up to the HES layer; integration with MDMS for the second manufacturer is in progress and expected to complete within the current quarter, short of the three-manufacturer requirement at the time of this submission.

Reference letters for two completed projects are enclosed (Annexure C); a third reference project is in its final commissioning phase and a completion certificate is not yet available.

2.3 Financial Criteria

Net worth was positive in two of the last three financial years; FY2023 reflected a net worth shortfall following a one-time asset write-down, as disclosed in the notes to the audited financial statements at Annexure D. Minimum Average Annual Turnover (MAAT) for the best three of the last five financial years is INR 78 crore, which is below the qualifying threshold typically applied for programs of this scale; the Bidder requests the evaluation committee consider turnover on a consolidated group basis, including its parent company, Meridian Infrastructure Holdings.

3. Insurance (Clause 6.28)

Meridian Power Solutions acknowledges the insurance requirement at Clause 6.28.1 for full insurance of Goods against loss or damage incidental to manufacture, transportation, storage, and delivery. The Bidder's current blanket transit policy is under renewal; coverage is pending as of the date of this bid, with the renewed certificate expected within 60 days. The Bidder does not currently maintain a standalone Commercial General Liability policy meeting a USD 2,000,000 per-occurrence limit; existing CGL coverage is capped at USD 500,000 per occurrence. The Bidder proposes to procure an enhanced policy meeting the higher limit only upon confirmation of contract award, to avoid carrying premium cost during the bidding stage.

4. Commercial Bid Summary

Pricing for the AMI system establishment scope is offered on a time-and-materials (T&M;) basis for site survey, installation, and integration labor, with materials (meters, communication hardware) priced on a fixed unit-rate basis. The Field Maintenance Services (FMS) period is priced on a per-endpoint-per-annum basis with an annual uplift of 7% to account for inflation and labor cost escalation, applied automatically at each contract anniversary without a separate approval step, which is a departure from the Change Order process at Clause 6.38.

Component	Basis
Site survey, installation & integration labor	Time & Materials (T&M)
Smart meters & communication hardware	Fixed unit rate
Field Maintenance Services (FMS)	Per-endpoint/annum + 7% annual uplift

Estimated Contract Value (T&M; basis, non-binding): approx. INR 38,00,00,000, subject to actual hours and material quantities consumed during execution.

5. Liability, Indemnity and Termination (Clauses 6.33, 6.35, 6.40)

Meridian Power Solutions is prepared to accept indemnification obligations broadly consistent with Clause 6.33, subject to negotiation of a cap on aggregate indemnity liability at 50% of the Contract Value; unlimited or uncapped indemnity exposure for third-party IP claims is not accepted in the form currently drafted at Clause 6.33.3. Survival of indemnity obligations post-termination (Clause 6.33.4) is accepted in principle, subject to the cap described above.

Regarding Termination at Clause 6.40, the Bidder requests that [Employer]'s right to terminate for convenience be removed or, alternatively, be made subject to payment of a minimum termination fee equal to six (6) months of projected FMS revenue; the ninety (90) day notice period as drafted is acceptable, but termination without cause as currently structured is not accepted without this compensation mechanism.

6. Additional Commitments

The Bidder targets a 99.5% system availability SLA for HES/MDMS, measured quarterly rather than monthly, and notes that the SLA Audit process at Clause 6.44 would need to be adjusted accordingly. Data hosting location will be confirmed post-award; the Bidder's current infrastructure includes a primary data centre in India with a secondary/DR site outside India, and data residency terms would need further discussion. The Bidder confirms it submitted pre-bid queries within the stipulated window per Clause 4.2.9.
